

# Inter-Providers Traffic Analyzer

Mix s.r.l. - Padova Ricerche

RIPE 46, 1-5 September, Amsterdam

Milan Internet eXchange

# Agenda

- Objective
- Architecture
- Anomaly detection

# Objective

- Monitoring the incoming and outgoing traffic of the ISPs connected to an IX
  - to detect anomalies and failures
  - analyzing the traffic at the physical layer

# Architecture

- Acquisition module
  - SNMP & PostgreSQL
- Computation module
  - Matlab
- Web interface
  - PHP
- Mail reporting system

# Computation module

➤ It calculates:

- Typical traffic intensity curve
- Current traffic intensity curve
- Mean square errors
- Anomaly score
- Correlation between anomalies

# Anomaly detection

- The starting form:

**Inter-Providers Traffic Analyzer**

developed by SINTESI Lab. at [DEI](#)

Considered day	day: <input type="text" value="04"/> month: <input type="text" value="08"/> year: <input type="text" value="03"/>
Direction	<input type="button" value="transmission"/>
Minimum required bandwidth peak [Mbps]	<input type="text" value="40"/>
Action	<input type="button" value="FIND ANOMALIES"/> <a href="#">MAINTENANCE</a> <a href="#">Contacts</a>

Milan Internet eXchange

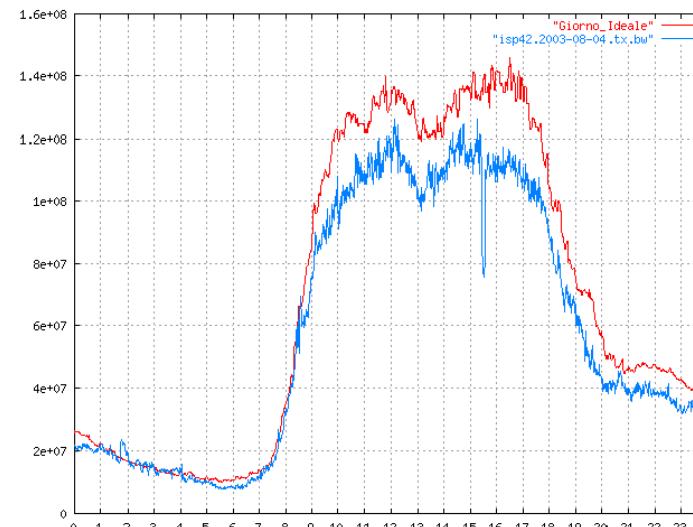

# Anomaly detection

- The traffic intensity curves:

Anomalies for interface **albacom [42]** tx on 4 Aug 2003
